Note concerning UEMO questionnaire on CME

Preamble

The objective of the enclosed questionnaire is to obtain a status for CME/CPD in the UEMO member organization countries. Since the current questionnaire is equivalent to that sent out three years ago, this will make it possible to form a basis for a written description of the development in CME/CPD in Europe.

As agreed in the CME working group, it was not considered sufficient to attempt to describe the status - there is a need for a more dynamic model by which the UEMO can continuously update its policy in order to keep pace of political developments and in order to facilitate the setting of political targets.

With the starting point in the information on national movements and targets concerning the themes identified in the questionnaire and the identification of national barriers against a desired development of conditions concerning CME, the need for change in the UEMO CME policy can be identified and initiated.

The last questionnaire was only answered by about 60 percent of the member organizations which caused difficulties drawing conclusions in analyzing the answers. Therefore, the Working group hopes that all the member organizations will answer this questionnaire as it will improve the quality of the data.

With regard to the transparency of the answers we have listed definitions of terms used in the questionnaire. These definitions are made after lengthy discussion in the Working group. However, the Working group is aware that there may be national conceptual divergence in the terms. If this is the case it therefore would be expedient if you mention such other definitions of the terms.

Please note that in this questionnaire there are three possible answers: yes no and N/A (not applicable)

In the case of questions please contact the chairman of the Working group, Peter Mortensen, e-mail pm@dadlnet.dk or telephone: +45 5678 8780.

Definition of terms employed

Accreditation - procedures by which an official organ confers formal recognition of the competence of an organization or individual to carry out specific tasks.

Certification - procedure by which a third party confers written assurance that a product, a system or a person fulfill certain specified ground requirements.

Registration - systematic documentation concerning an individual doctor's CME activities.

Registration systems can involve the setting of quantitative norms. By deciding what can be registered, qualitative norms are incorporated into the process.
